NATURALLY INNOVATING

WILMA GROW SYSTEMS

COMPLETE GROWING SYSTEMS FOR EVERY GROWER!

GROWING IN POTS HAS NEVER BEEN **SO EASY**

The Wilma offers the flexibility of growing in pots, with the accurate feeding and increased yield benefits of active hydro.

WHY THE WILMA SYSTEM PRODUCES GREAT RESULTS

Frequent feeding means greater uptake of water and nutrients. Active hydroponics: roots do not rely on the capillary action of the growing medium. Free-draining root zone means no nutrient build-up or water-logging.

THE BENEFITS OF THE WILMA SYSTEM

Bigger yields – plants take up more water and nutrients than in hand-watered pots, as they are fed little and often. Larger systems are supplied with two drippers per pot.

More choice – grow in soil, coco, clay or rock-wool; there is a Wilma dripper for every medium. Grow 4, 5, 8, 10, 16 or 20 plants.

Less hassle – the Wilma is low maintenance. An easy access reservoir allows growers to manage one nutrient solution tank for up to 20 plants and top up every couple of days - far easier than hand watering.

Flexibility – pots in a Wilma are independent of one another; plants can be moved around under lights or replaced. A timer is used to increase the number of feeds to suit the life stage of the plants.

Reliability – the Wilma has a reliable anti-leak design. The Wilma pots fit snugly into perfectly sized 'slots' in the tray, which in turn sits over a reservoir greatly reducing the chance of leaks.

Adaptable – one solution tank is suitable for up to 3 tray options of differing pot numbers and sizes.

Practical – external nutrient solution mixing tap to ensure optimum consistency/levels after topping up the reservoir.
